

All Party Parliamentary Group for Sustainable Flood and Drought Management

Meeting Agenda

“Managing Rainwater where it falls- with the country facing a potential 5 billion litre per day supply deficit by 2050, surface water flood risk increasing significantly and combined sewer overflows a major headache for government, capturing and slowing down water where it falls can deliver multiple, important outcomes. This session will explore how rainwater harvesting and sustainable drainage can unlock resilient growth”.

Wednesday 14th May| 2.45 – 3.45pm

Portcullis House, 1 Victoria Embankment, London, SW1 2JR

Face-to-face meeting - Room M
